

Create default pod

```
apiVersion: v1
kind: Pod
metadata:
  name: nginx
spec:
  containers:
  - name: nginx
    image: nginx:1.14.2
```

**Assignment: Create and list pod in test namespace. Use same nginx image**

apiVersion: v1

kind: Pod

metadata:

name: multi-pod

namespace: amit

spec:

containers:

- name: nginx-container

image: nginx

- name: ubuntu-container

image: ubuntu

kubectl create -f multi-pod.yaml

kubectl get pods -n amit

kubectl describe pod multi-pod -n amit

kubectl logs multi-pod -n amit
